3XR
PARTICLE BOARD

[ABAXKF.COM.AU](https://www.abaxkf.com.au)

3xR Particle Board is a fully sustainable, 100% recycled E0 commercial-grade melamine product that is made in Australia.

How it's made...

ECO-FRIENDLY

3xR Board is created from used melamine boards, adhering to the principles of "Reduce, Reuse, and Recycle." The old boards are first chipped, decontaminated, and cleaned, before being transformed into new melamine boards.

This cycle can be repeated indefinitely, providing a genuine, comprehensive life-cycle management solution. 3xR Board is ideal for applications in high humidity environments and designed for indoor spaces such as classrooms, offices, libraries, reception areas, and more.

SUIT ANY SPACE

There are a range of modern, popular finishes available, with more to be added.

- OAK
- MAPLE
- WALNUT
- WHITE
- GREY
- BLACK

Why choose 3xR board?

SUSTAINABILITY

Manufactured in Australia and distributed by Abax Kingfisher, 3xR Board features melamine décor surfaces.

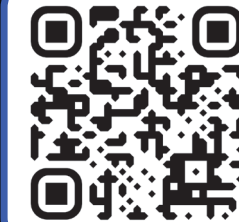

This revolutionary method has prevented over 130 thousand tonnes of wood waste from ending up in landfills. Embodying the tagline "Reduce, Reuse, and Recycle," the 3xR Board is also entirely recyclable. This ensures that, at the end of its lifespan, the board can be recycled and transformed into a new 3xRBoard.
